Notes

- PoE features are applicable only to the model numbers with a POE or FPOE suffix.
- 24-port LAG is applicable to 524D, 524_FPOE, 1024D, and 3032D models. 48-port LAG is applicable to 548D, 548_FPOE, and 1048D models.
- To use the dynamic layer-3 protocols, you must have an advanced features license.
- The per-VLAN learning limit is not supported on dual-chip platforms (248 and 448 series).

Default flow-control state changed to disable

This change allows a port to ignore the pause frame it receives. You can still enable flow control on a port if so desired by using the following CLI commands:

To enable flow control on *both RX and TX*:

```
S548DN4K16000360 # config switch physical-port
S548DN4K16000360 (physical-port) # edit port9
S548DN4K16000360 (port9) # set flow-control both
```

To enable flow control on RX only:

```
S548DN4K16000360 # config switch physical-port
S548DN4K16000360 (physical-port) # edit port9
S548DN4K16000360 (port9) # set flow-control rx
```

To enable flow control on TX only:

```
S548DN4K16000360 # config switch physical-port
S548DN4K16000360 (physical-port) # edit port9
S548DN4K16000360 (port9) # set flow-control tx
```

Connecting multiple FSW-R-112D-POE switches

The FSW-R-112D-POE switch does not support interconnectivity to other FSW-R-112D-POE switches using the PoE ports. Fortinet recommends using the SFP ports to interconnect switches.

Upgrade information

FortiSwitch 3.6.3 supports upgrading from FortiSwitch 3.5.0 and later.

Cooperative Security Fabric upgrade

FortiOS 5.4.1 greatly increases the interoperability between other Fortinet products. This includes:

- FortiClient 5.4.1
- FortiClient EMS 1.0.1
- FortiAP 5.4.1
- FortiSwitch 3.4.2

The upgrade of the firmware for each product must be completed in a precise order so the network connectivity is maintained without the need of manual steps. Customers must read the following two documents prior to upgrading any product in their network:

- *Cooperative Security Framework - Upgrade Guide*
- *FortiOS 5.4.0 to 5.4.1 Upgrade Guide for Managed FortiSwitch Devices*

This document is available in the Customer Support Firmware Images download directory for FortiSwitch 3.4.2.

Resolved issues

The following issues have been fixed in 3.6.3. For inquiries about a particular bug, please contact [Customer Service & Support](#).

Bug ID	Description
423161	You cannot use the VLAN system interface to ping two neighboring FortiSwitches with IPv6 addresses.
443999	When a port with BPDU guard enabled receives BPDUs and the port goes down, the GUI does not show that the port is down.
441901	EAP TLS authentication is not supported.
445355	The FortiSwitch does not route a packet when the destination MAC address was learned through a different interface.
393845	Newly created static MAC address may not get added in MAC address table when 802.1x feature is enabled on same interface.
410200, 393845	802.1x: VLAN programming received from a RADIUS server can be overwritten by CLI configuration. Workaround: Do NOT manually change the VLAN assignment on a port that is in an authentication state.
423161	The system is unable to ping two IPv6 neighbors using the VLAN system interface.
444484	A switched virtual interface that has DHCP mode enabled and DHCP snooping enabled cannot get the IP address from the DHCP server.
441840	When two FortiSwitches have the same IP address and are connected to the same VLAN on a management switch, no log message is generated.
424096	(Access VLAN) A host in the same access VLAN can receive IGMP messages from other hosts.

Known issues

The following known issues have been identified with 3.6.3. For inquiries about a particular bug or to report a bug, please contact [Fortinet Customer Service & Support](#).

Bug ID	Description
456947	After upgrading to FortiSwitchOS 3.6.3, DHCP relay stops working. Workaround: Enable DHCP snooping.
440045	Configuring VLANs that have IGMP snooping enabled is slow. Workaround: Disable IGMP snooping on the trunk interface when configuring VLANs.
434680	Modifying or disabling a split port does not remove entries.
391607	Switch does not send gratuitous ARP for IP conflict when the system boots up and adds a new switch virtual interface (SVI).
414972	IGMP snooping might not work correctly when used with 802.1x Dynamic VLAN functionality.
416655	IGMP snooping might not work correctly when used with 802.1x Dynamic VLAN functionality.
417024, 438441	DHCP client lease time on PVLAN is inaccurate.
417073, 438441	DHCP MAC address client is learned on Primary VLAN instead of the isolated VLAN.
417099, 438441	The system shows no DAI stats entry on PVLAN ports.
423940	In some cases, the MAC address and VLAN ID are shown (diagnostic command) twice on the same interface after splitting ports.
434680	If you have a sticky-MAC address on an interface which is moved to split-port mode, some entries may remain. Workaround: Clear sticky-MAC address before changing to split-port mode.
380239	IGMP-snooped multicast groups are not immediately flushed out of the snooping table when the querier port is shut down.
